

APPLICATION MODERNIZATION ASSESSMENT

The Application Modernization Assessment assists customers in identifying and prioritizing applications for modernization to Azure, thereby enhancing business agility and streamlining processes to meet current and future business objectives. Applications are evaluated from both a business, user experience and architectural perspective to provide customers with cost consumption estimates, reference architecture design, and a modernization plan.

Sounds familiar?

- Feature updates are taking too long to implement
- The application can not handle the business needs anymore
- Our application is not ready for remote working in a secure way
- We are running out of resources to cope with performance requests
- End users experience doesn't meet current standards
- TCO of application is too high due to poor maintainability

What we will do.

- Intake videocall
- Application Assessment
 - cloud readiness
 - security
 - performance
 - devops

Deliverables

- Assessment report
 - Advised modernization approach
 - action plan
 - price estimation
- Presentation of the report

Fixed price 4.000 € (VAT excl)
